What Surprised Me:

I was surprised by some of my findings. The one that surprised me most is the projected growth of 13% for personal financial advisors. In my opinion, investing will only continue to become more accessible which will diminish the need for financial advisors. In addition, seeing the projected growth of -11% for computer programmers was surprising. However, I noticed that more specialized roles within the industry will hold up better.

My Rankings and Why:

1. Information Security Analyst
   a. Relates to technology and has the best projected job growth of positions analyzed (32%)
2. Database Administrator and Architect
   a. Relates to technology and has decent job growth (8%)
3. Computer Network Architect
   a. Relates to technology and has decent job growth (4%)
4. Computer Programmer
   a. A topic I am interested in, but ranked lower because of poor job outlook (-11%)
5. Project Management Specialist
   a. Doesn't relate directly to technical aspects of technology but can play a role in creating products. Also has okay job growth (6%)
6. Management Analyst
   a. Good growth (10%) and pays well but not as interested in working in the industry.
7. Personal Financial Advisor
   a. Enjoy personal finance but I doubt the project growth of 13%
8. Civil Engineer
   a. Do not have prior experience related to the field
